

INVESTMENT OBJECTIVE

The 4D BCI Flexible Fund aims to maximise total return for investors by way of a flexible portfolio actively investing across different asset classes.

INVESTMENT POLICY

The portfolio may invest in global and local equity securities, government, corporate and inflation linked bonds, debentures, non-equity securities, property shares, property related securities, preference shares, money market instruments and assets in liquid form. The Manager may make active use of derivatives to reduce the risk that a general decline in the value of equity, property and bond markets may have on the value of the portfolio. The manager shall have the maximum flexibility to vary assets between the various markets, asset classes and countries to reflect the changing economic and market conditions. The portfolio may from time to time invest in listed and unlisted financial instruments.

RISK PROFILE

Moderate - High Risk

- This portfolio holds more equity exposure than a medium risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a medium risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a medium risk portfolio, but less than a high-risk portfolio and the expected potential long-term investment returns could therefore be higher than a medium risk portfolio.
- Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks.
- The portfolio is exposed to equity as well as default and interest rate risks.
- Therefore, it is suitable for medium to long-term investment horizons.
- The portfolio may have a high exposure to derivative instruments, which may carry additional risks
